

## Modal Project (3)

### Project Description:

This project we will use HTML, CSS & Javascript to create a web page that will display buttons including specific algorithms, which when selected will display the Javascript code built & developed by the developer/engineer.

### Project Goals:

- Successfully build Modal Web Page using HTML, CSS & Javascript DOM Manipulation
- Develop template (Instructions) that is easily interpreted & use-case for building future Web Modal Pages, breaking down HTML & CSS classes & elements ex. parent-elements, child-elements, positioning etc !
- Clearly record road-blocks(code) & workarounds

### Project Objectives:

- Build & display more than one button on this page that will show the code for the specific algorithm selected via buttons
- Record any new learning ie. HTML / CSS properties
- Update description, goals & objectives as required
- Review & conclude project when finished (Google Docs Report)

### Design/Style/Layout

- Focus on creating a retro/old school visual for this frontend web page (ie. space invaders, Windows 98 etc.)
